RemoteLock Connect

Commercial Smart Lock Management

Manage one or 100s of locations all from our cloud-based RemoteLock Connect system. Want to know when your employees open up your office or store? Need to add or revoke access remotely? Each location calls direct to our cloud, keeping one central location for all access data.

Control Multiple Lock Types

With RemoteLock, the Cloud Platform for Smart Locks, manage exterior entry doors, interior doors, garage entry, elevators, and other common door areas all on the same system. The RemoteLock platform easily integrates with your existing door readers and hardware if you already have a system installed that you are looking to upgrade.

Easy Web-Based Management

The RemoteLock web platform has a simple browser-based interface that allows anyone to easily manage the system, add & delete users, and manage access... even on their first login.

RemoteLock manages the platform, system updates and security all from the cloud. With no on-site software or system server needed, we have taken the complexity out of your access control as well as the need for IT staffing to manage your system.

Centralized Control for Multiple Facilities

RemoteLock removes the need for on-site servers and a dedicated workstation, letting you manage multiple sites from one location, even if they are spread out across the world. Quickly and easily add additional doors or building sites to the RemoteLock cloud-based platform. Internal doors can be added in minutes with RemoteLock WiFi door locks... no need for wiring!
